

Brief information about the project

Name of the project	Problems of Legal Regulation of the Production and Circulation of Organic Agricultural Products in the Republic of Kazakhstan
Relevance	At present, humanity increasingly recognizes the advantages of consuming organic products in ensuring quality of life and achieving economic, social, and environmental benefits for future generations. Preventing environmental pollution through the prohibition of the use of chemicals and other substances, including various pesticides in organic production, contributes to mitigating the consequences of climate change, ensuring the rational use of natural resources, and promoting sustainable development. The project is interdisciplinary and is based on the experience of scholars in the fields of law, economics, chemistry, and agricultural production. In national legal science, comprehensive studies of the legal forms and methods of regulating organic agricultural production are lacking, although the global market for organic products continues to grow and the demand of the population for such products in the country is steadily increasing. Practice shows that organic production excludes the use of most synthetic pesticides, fertilizers, and genetically modified organisms (GMOs). This contributes to the preservation of natural resources and ecosystems and supports the implementation of sustainable development policies. At the same time, the underdevelopment of the domestic organic products market, the absence of effective economic mechanisms that stimulate the development of the organic products market, including access to international markets, require the adoption of a comprehensive set of measures. These measures should include economic, political, legal, and other instruments, which necessitates close attention from the scientific community. The above circumstances demonstrate the relevance and demand for comprehensive research in the field of legal regulation of the production and circulation of organic agricultural products.
Purpose	The main Purpose of the project is to conduct a comprehensive analysis and develop proposals for improving the legal regulation of the production and circulation of organic agricultural products in Kazakhstan. This includes the study of existing legal

	norms, identification of gaps and contradictions in legislation, and the development of recommendations for creating a more effective and sustainable legal framework that will promote the development of organic agriculture, protect consumer rights, and improve the environmental situation in the country.
Objectives	Objectives for 2025 ● To conduct a detailed analysis of the current legal norms regulating the production and circulation of organic agricultural products in Kazakhstan in order to identify weaknesses and problematic aspects. ● To study the conditions and principles of organic production, the system of transition to organic production, as well as the rights and obligations of producers. It is also planned to determine the list of rights and obligations of landowners, land users, and other producers of organic products. This task is aimed at analyzing the institutional and legal context of the Republic of Kazakhstan, including the agricultural, environmental, and other areas of legislation related to organic agricultural production, as well as policy frameworks and practical implementation related to the production and circulation of organic products. It will also include a review of relevant literature and contextual interviews. Key indicators include the number of interviews with experts and the analysis of relevant documents and data. Objectives for 2026 ● To study the economic mechanism of organic production and determine the system of payments in the field of organic production and the circulation of organic products. It is also planned to examine the system of state support measures for the production and circulation of organic products, as well as tax, customs, and other economic incentive instruments. ● To analyze the activities of state and other authorities responsible for governance in the field of production and circulation of organic products. These tasks will include observations, informal interviews, and semi-structured interviews. Measurable indicators for this task include the number of interviews conducted, the collected data, and the regions covered.

	Objectives for 2027 • To conduct a comparative legal analysis of national and foreign legislation, as well as international legal acts in the field of production and circulation of organic products. • To develop proposals for amendments and additions to legislative and regulatory acts in order to eliminate the identified gaps and create a more sustainable legal framework. • To study the international and national control systems in the field of organic production, as well as the certification and labeling systems of organic products. In addition, it is planned to examine judicial practice related to the application of legislation on the production and circulation of organic products and to develop educational case studies on the protection of the human right to healthy food. These tasks will include an analysis of the legislation of the Republic of Kazakhstan and foreign countries, which will help identify effective legal mechanisms and develop recommendations for improving the legal regulation of the production and circulation of organic agricultural products.
Expected and achieved results	1. Within the framework of the project, the following publications will be produced: • At least two (2) articles or review papers in peer-reviewed scientific journals indexed in the Social Science Citation Index (SSCI) and included in the first or second quartile by impact factor in the Web of Science database, and/or journals with a CiteScore percentile of at least 50 in the Scopus database. • At least four (4) articles and/or review papers in peer-reviewed foreign and/or domestic journals recommended by the Committee for Quality Assurance in Science and Higher Education (CQASHE). One of the articles will be published in the multidisciplinary category (multidisciplinary or interdisciplinary practical application). For domestic journals included in List 1 of CQASHE that do not belong to the multidisciplinary category, journals from Lists 1 and 2 of CQASHE indexed in two or more subject categories will be counted. 2. In addition:

	• One (1) monograph with a volume of at least 5 printed sheets will be published, with the contribution of the research team members amounting to at least 3 printed sheets, recommended by the academic or scientific-technical council of an accredited scientific organization. • One (1) textbook or teaching manual will also be published

Использование	The results of the project will be used as recommendations for legislative bodies and executive state authorities in matters related to the legal regulation of the production and circulation of organic agricultural products.
Приоритет в сравнении с реальными аналогами	The fundamental difference of the project idea from existing analogues lies in its comprehensive approach to the legal regulation of organic agriculture, which takes into account both national and international aspects. While many similar studies focus on individual elements, such as standards or certification systems, this project aims to develop an integrated model of a legal mechanism that combines all components, including economic, social, and environmental factors. Such an approach will allow the formation of a coherent and effective legal framework for the development of organic agricultural production and the circulation of organic products.
